

Creating a basic MVC Website Using Entity Framework

1. Please follow the tutorial instruction and complete the tutorial (Topic 8) that demonstrates creating an MVC project using Entity Framework.
2. Create a University Campus model class and Student model class. Please add a one-to-many relationship between University Campuses and Students, where a University Campus may have one or many Students.
 - a. Student model has the following information:
 - i. ID, Name, Address, Campus
 - b. University Campus has the following information:
 - i. ID, Name, a collection of students
3. Create navigation properties for each model class.
4. Describe how the relevant properties implement the one-to-many relationship and describe the purpose of the navigation properties.
