

Download **Visual Studio Community 2022** <https://visualstudio.microsoft.com/vs/>

When you install Visual Studio, make sure that **ASP.NET and web development** and **.NET Framework project and item templates** are selected.

Create a new project, select your language, platform and project type. I selected **C#**, **Windows**, and **Web**, enter **.NET Framework**

You should have **ASP.NET Web Application (.NETFramework)**

If you cannot see **ASP.NET Web Application (.NETFramework)**, just scroll down and click **install more tools and features**, make sure that **ASP.NET and web development** and **.NET Framework project and item templates** are selected. Then click **Modify** to install the selected tools.
