## *Tutorial 1a – HTML Markup*

HTML markup is the application of tags to content to create elements. These elements are primarily structural, though some also have side effects that are presentational. For example different levels of heading provide structure to blocks of text, but the browser will also apply different presentation formats to different levels of heading. Other common features of markup relate to images, hyperlinks, lists and tables.

For this tutorial, you should mark up the following content using HTML tags. There is no single ‘right’ answer, but some approaches to the markup will make more sense than others.

Massey University – Programmes and Papers

massey-logo.jpg

Programmes and papers

Programmes are the qualifications (e.g. certificates, diplomas, degrees) that you can study at the University. Programmes are made up of papers.

academic year

The academic year is divided into two semesters followed by Summer School. Papers can be taught during one semester or over two semesters.

locations

You can study papers internally on the Albany, Manawatu and Wellington campuses as well as by distance learning (extramurally).

We offer over 200 programmes so whatever you are looking for it is likely that Massey University as the largest university in New Zealand, offers it.
